

## Software Developer

Our company is seeking to hire a skilled software developer to help with the development of our current projects. Your roles will primarily focus in building software by writing code, as well as modifying software to fix errors, adapt it to new hardware, improve its performance, or upgrade interfaces. You will also be involved in the management of the system testing and validation, as well as working closely with customers or departments on technical issues such as software system design and maintenance.

To be successful in this role, you will need extensive knowledge of programming languages and the software development life-cycle. A bachelor's degree in computer science or related degree is required.

### Responsibilities:

- Modifying software to fix errors, adapting software to new hardware, improving performance, and upgrading interfaces.
- Controlling and directing system testing and validation procedures.
- Managing the development of software and documentation.
- Consultation on project status and proposals with departments, project manager or customers.
- Working on technical issues with customers or departments, such as software system design and maintenance.
- Developing software solutions by studying user needs, data usage, and systems flow
- Documenting with flowcharts, layouts, diagrams, and code comments.
- Preparing reports on programming project specifications, activities, or status.

### Requirements:

- Bachelor's degree in computer science or related degree.
- Managing the software development life cycle
- Must be a full-stack developer with a thorough understanding of software engineering concepts.
- Min 3-4 years related working experience on a variety of software development projects.
- Possess an extensive knowledge of software testing and debugging.
- Deep knowledge of programming in C#, .NET Core and MySQL. Knowing PHP and jQuery would be a plus.
- The desire to work in a fast-paced environment.
- Creativity is always a plus.
